

Fire Safety Training

Your guide to Fire Safety Training by Allfire

www.allfireuk.com

Fire Safety Training - What You Need to Know

Whether you need basic fire awareness training for your team, more advanced training for your fire wardens and building managers, or perhaps a more specialist course such as confined space or spillage, we can satisfy your requirements.

If you aren't sure what training you need, just give us a call.

Legislation states that all employees must be trained in the actions to be taken in the event of a fire.

Standard courses we offer include:-

- Fire Awareness Training
- Fire Warden Training
- 'Responsible Person' Training
- Building Manager Training

We can also design bespoke courses to meet any specific needs you may have.

Emergency Response Training

The range of training we provide within emergency response varies depending upon the hazards you have and the equipment you use, as well as your

preferred methods of dealing with incidents (this will be in your policies and procedures).

The courses we provide form the common parts of emergency response and fire fighting training for commercial sites with high risk activities and products on their sites.

Allfire - Here to Help

At Allfire we offer the full range of fire risk management and fire engineering solutions to help you comply with the Regulatory Reform (Fire Safety) Order 2005.

Our team are all very well qualified in their specialist fields and are very experienced in providing solution focused compliance.

We are committed to adding value and minimising the cost of compliance through the interpretation of any relevant standard on behalf of our clients.

Standards are written in a way to cover as broad a scope as possible. Our team quantify the risk in relation to the detail outlined in all relevant Standards. This

gives us a deep understanding of what the standards are seeking to achieve relative to the risk.

We balance the risk taking into account probability, consequences and our client's liability.

We focus on mitigating the risk of business interruption and litigation faced by our clients due to the consequences of non-compliance.

Allfire design remedial measures to reduce risk in a way that is cost effective yet in no way undermines any current standards or legislation.
